# Why measure Attention?

A growing body of evidence supports that Attention is a stronger predictor of business outcomes

## Branding based evidence

**Attention** predicts branding outcomes

**3x**

better than viewability metrics

**dentsu** **LUMEN**

## Sales based evidence

**Attention metrics** were

**180%**

More correlated with ROI compared to viewability metrics

Adelaide  Nielsen

**Attention** is a

**better predictor of sales conversion**

rate compared to viewability

# Why Attention measurement matters?

## Meaningful

Attention is highly correlated with ROI

## Cookieless

A sustainable and privacy-safe measure of advertising impact

## Scalable

Easy to activate on any campaign with scale

## Omnichannel

Potential to be leveraged as a common currency across advertising channels

# How Attention can be measured?

1

## Eye-tracking Panel

Continuously collecting **attention data** (ad views, eyes-on dwell time) and **environmental signals** (ad format, duration in view, domain, ad clutter...) with a fully consented eye tracking panel on desktop/mobile.

2

## Predictive Modelling

A **machine learning algorithm** identifies how environmental signals correlate with attention outcomes to create a model.

3

**Teads** AD MANAGER

Apply to your campaign

**Environmental signals are captured** on each impression via a tag embedded in the creative

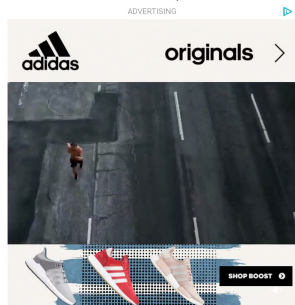

**Attention is estimated** by the model based on the tracked environmental signals.

# We validated Attention drivers

effectiveness and build a  
competitive advantage**

# Attention & Brand Lift

There is a clear relationship between attention and brand outcomes.

# High attention delivered 1.8x the ROI of low attention

To understand the impact of attention on sales, Teads created two geographic regions. One designed to deliver high attention, the other to deliver low attention.

High Attention = Enriched targeting, Optimized creative

Low Attention = Enriched targeting, Unoptimized creative, removal of news content

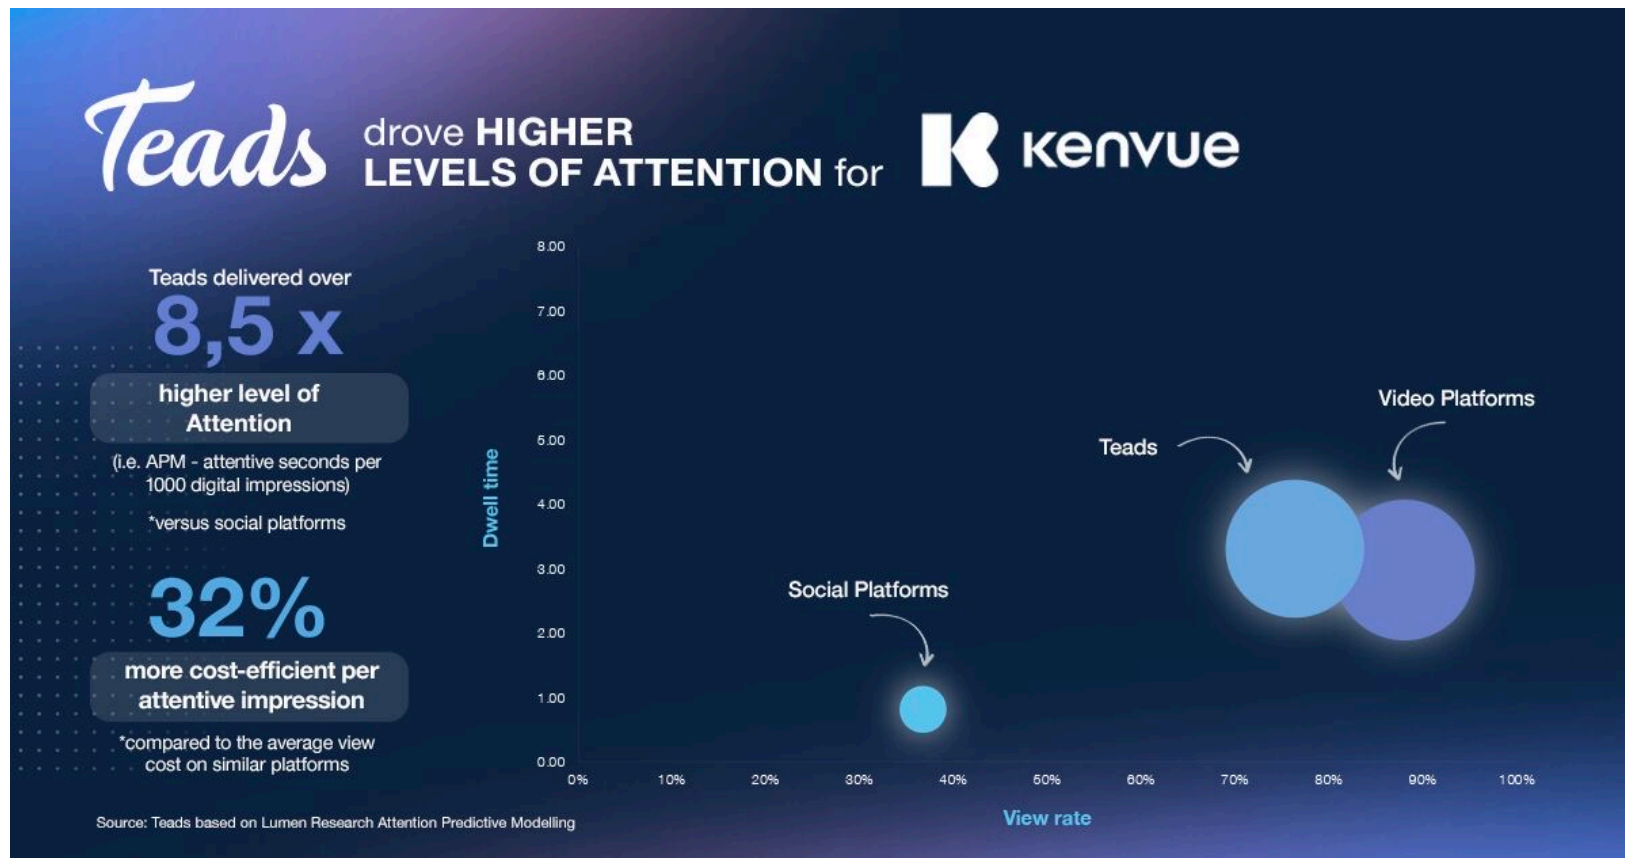

ROI for Yoghurt Drink Brand

# Attention on Teads is significantly higher than Social Media

Advertising with Teads drove 8.5X more Attention than Social Platforms for Kenvue in Poland

# First-ever campaign optimized for Attention in Turkey for a FMCG brand: 20% higher APM and 21 % better aCPM

## Objective

Increase the users' Attention and improve the cost efficiency for an international FMCG brand.

## Teads solution

The client leveraged Teads native integration with Lumen Research to measure the Attention of the users when exposed to the campaign and optimize the achieved exposure based on live results.

## Primary KPIs

APM = Attentive seconds per 000 impressions  
aCPM = cost per 000 Attentive seconds.

## Key Highlights & Results

**+20%** Higher APM      **-21%** Better aCPM

By optimizing in real-time the campaign investment and eliminating the worst performing formats and publisher placements, Teads and the media agency team were able to significantly increase the Attention results and improve the cost efficiency from the first to the last week of the activation.

# The campaign was optimized 2X, during week 4 and 6 of the activation

# We have more to learn

## EVOLVE ATTENTION IN CTV

## CORRELATE CONTEXT + ATTENTION

## ACTIVATE ATTENTION- BASED PLANNING
